Report on tankwatravels.com and erp.tankwatravels.com

1.As we communicate before the BY task which is (tender) was deployed from both client side and admin side and tested and passed. But there are some issues that communicate with BY like(when admin rejects request then rejection must arrive for client and if admin rejects unconsciously then admin can not return to approve....)

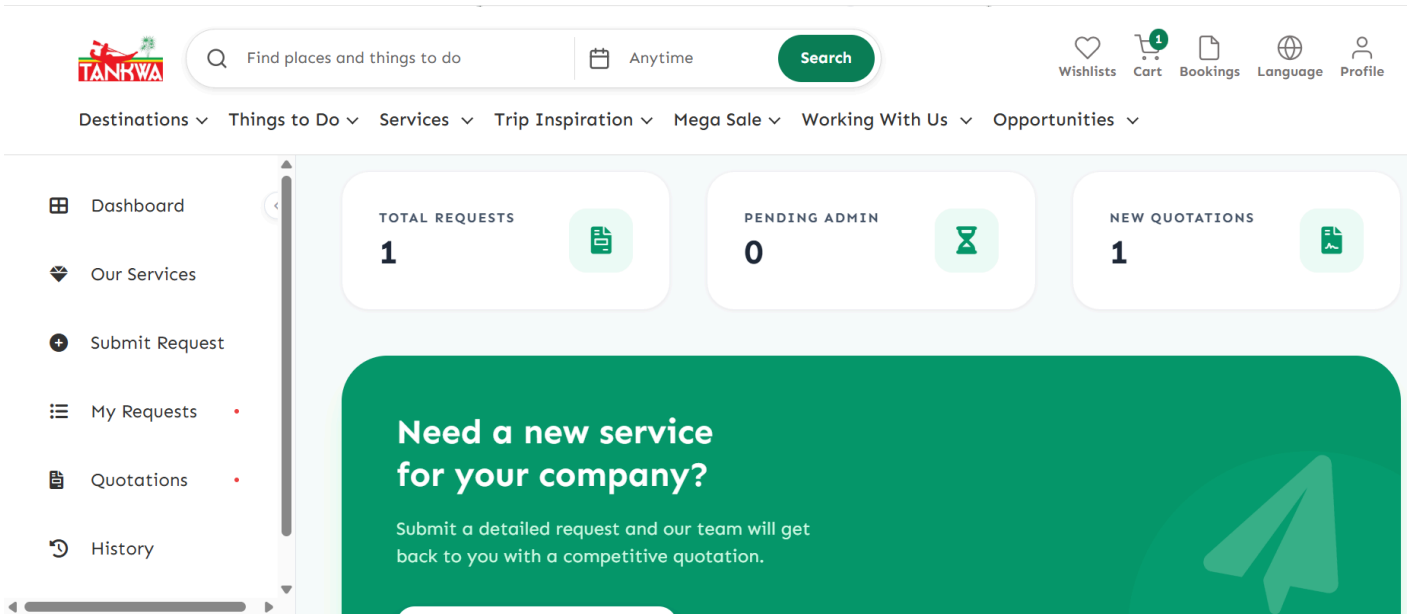

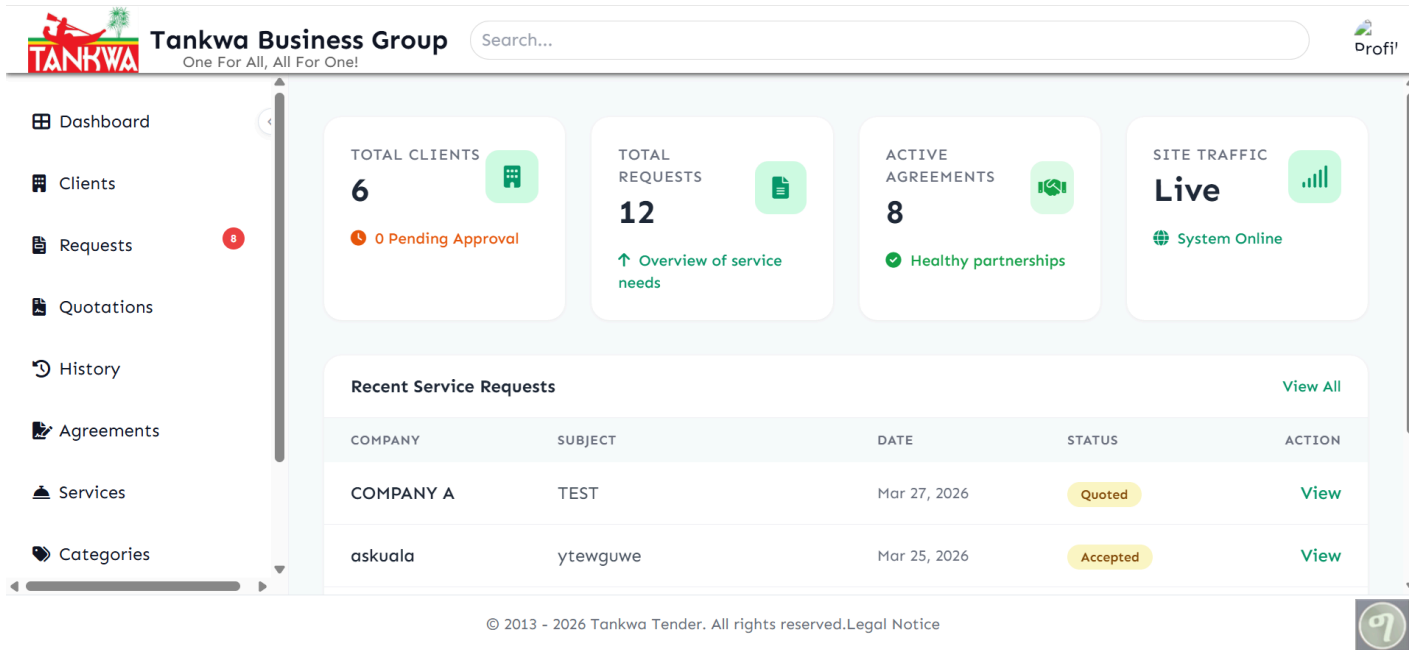

Scale Your Business Through Professional Tenders

A seamless bridge between companies and service providers. Submit requests, review quotations, and finalize agreements in one secure platform.

2. On the BA side when a client or passenger sends a request using a web app, the passenger successfully receives book reservation and pending payment via email. And fix the issue that falls on application issues that can not read each other with cpanel. And on the sales side when sales record passenger tickets automatically the passenger receives a ticket via emailand this is fully tested for new and exchange tickets.....

N:B on BA side there are few issues related with logo on email templatewhen we want to to finish at final time (after 10:40 LT) there is an internet issue on my side.

This is answer for your question for why BA task is not arrive on time...b/c when BA send file and we try to deploy the code have some issue then at that time we try to debug together then this process takes time in addition to it internet issue is on problem both me and BA side(yesterday after 9:00 LT).

The Flight Ticket Completion Form displays the following information:

Flight Booking			
00000007153		FLPQKM	Search
Coupon Number	00000007153	Total Service	1498.00

3. On my own side I add a new header menu on tankwatravels.com and collect sub-menu(tender,vacancy,feedback) that are under profile. And i do update for email on coupon that used to send email for former passenger then when update email passenger receives their credential via email(it requires few effort)
